

ADITHYA VIKRAM R NAIR

Aspiring Cybersecurity Analyst

+919400675445 ● adithyavikram2001@gmail.com ● LinkedIn ● GitHub ● Hack The Box

SUMMARY

Aspiring cybersecurity professional with foundational knowledge in ethical hacking and programming using C and Python. Strong interest in cybersecurity practices, Malware Development and analysis, threat analysis and system protection. Actively building skills through learning and hands-on practice.

EDUCATION

M.Tech in CSE with Specialization in Cybersecurity 2025 - Present
Cochin University of Science & Technology

B.Tech in Information Technology 2019 - 2023
Government Engineering College, Barton Hill, Thiruvananthapuram
CGPA: 7.29

Higher Secondary 2017 - 2019
SMV HSS POONJAR
Percentage: 91.6

TECHNICAL SKILLS

Security Domains: Malware Analysis, Penetration Testing, Ethical Hacking, Network Security

Languages: HTML, C++, C, Python

Tools: nmap, metasploit, Wireshark, OWASP ZAP, Kali Linux, pefile, CAPE Sandbox, Mandiant CAPA,

Platforms: Hack The Box, OverTheWire

EXPERIENCE

Cyberlabs IIIT-Kottayam 2026 May-June
Cyber Security Intern Kottayam, Kerala

- Conducted static and dynamic malware analysis using industry-standard tools including CAPE Sandbox, PEfile, CAPA, FLOSS, YARA, VirusTotal and Wireshark to analyze malware behavior, identify Indicators of Compromise (IOCs), and map techniques to the MITRE ATT&CK framework.

PROJECTS

AI-Powered Malware Analysis Framework using Local Large Language Models 2026

- Developed an AI-driven malware analysis framework that automates static malware analysis using a multi-agent architecture built with LangGraph and Ollama running Llama 3/Qwen locally.
- Integrated industry-standard analysis tools including PEfile, FLOSS, CAPA, YARA, VirusTotal, and MITRE ATT&CK to extract malware capabilities, indicators of compromise (IOCs), risk scores, and threat intelligence.
- Implemented automated PDF/HTML report generation with malware family classification, ATT&CK mapping, capability assessment, and risk analysis, significantly reducing manual malware triage effort.

AI-Powered Malware Static Analysis Platform with MCP Integration 2026

- Architected a Model Context Protocol (MCP) server on an isolated Windows VM that exposes professional-grade static analysis tools (pefile, FLOSS, Capa, YARA, Strings) as callable functions to a large language model (Claude).

- Engineered an automated analysis pipeline that performs PE header inspection, entropy-based packing detection, obfuscated string extraction, and MITRE ATT&CK capability mapping on suspicious executables.
- Deployed Claude as an expert malware analyst persona with deep knowledge of threat actor TTPs, malware families, and ATT&CK framework mapping to generate actionable intelligence reports from raw tool output.

Decentralized Application for Health Insurance Distribution

2022-2023

- Developed a blockchain-based decentralized application for health insurance distribution using Ethereum.
- Designed and implemented smart contracts in Solidity to automate claim processing, premium payments, and policy management.
- Built a secure and transparent system eliminating intermediaries, reducing fraud, and ensuring data immutability.

E-commerce Website for Farmers

2021 – 2022

- Developed a full-stack e-commerce web application enabling farmers to sell products directly to consumers, eliminating middlemen.
- Built responsive UI using HTML, CSS, Bootstrap and backend with Node.js, Express, MongoDB.
- Implemented features like product listing, cart management, checkout, and user authentication.
